

Skill Ramp-Up Plan - Part 5 (tailwind)

Block 0 – Setup & IDE Configuration

Skills

- I can install and configure Tailwind CSS in a new project (CLI, PostCSS, or framework integration).
- I can create and edit the `tailwind.config.js` file.
- I can enable JIT mode and understand how it generates utility classes.
- I can configure my IDE with Tailwind CSS IntelliSense (autocomplete, class highlighting, linting).
- I can apply a first utility class (e.g. `text-red-500`) and see the effect in the browser.

Resources

- [Tailwind Installation Guide](#)
- [Configuration Reference](#)
- [Tailwind IntelliSense VS Code Extension](#)

Definition of Done (Exercise)

Initialize a blank project with Tailwind CSS, configure the IDE with IntelliSense, and apply a red text class to an `<h1>` element to verify styling works.

Block 1 – Typography & Colors

Skills

- I can apply text size (`text-sm` , `text-lg` , etc.) and font weight (`font-bold`).
- I can use text color and background color utilities (`text-blue-600` , `bg-gray-200`).
- I can apply letter spacing (`tracking-wide`) and line height (`leading-relaxed`).
- I can switch colors using the Tailwind color palette.

Resources

- [Typography Docs](#)
- [Color Palette](#)

Definition of Done (Exercise)

Create a simple article page with a heading, paragraph, and button, each using different font sizes, weights, and colors.

Block 2 – Spacing & Layout

Skills

- I can apply margin (`m-4` , `mx-auto`) and padding (`p-2` , `px-6`).
- I can use width and height utilities (`w-1/2` , `h-screen`).
- I can control max-width (`max-w-lg`) for readability.
- I can apply `container` and `mx-auto` for centered layouts.

Resources

- [Spacing](#)
- [Width & Height](#)

Definition of Done (Exercise)

Build a card component with custom padding, margin, width, and height, ensuring it is centered on the page.

Block 3 – Flexbox & Grid

Skills

- I can create a flex container (`flex`) and control direction (`flex-row` , `flex-col`).
- I can align and justify items (`items-center` , `justify-between`).
- I can create responsive grids (`grid-cols-2` , `md:grid-cols-4`).
- I can control gaps between items (`gap-4`).

Resources

- [Flexbox](#)
- [Grid](#)

Definition of Done (Exercise)

Create a responsive layout with a header (flexbox), a main content area (grid with 3 cards), and a footer.

Block 4 – Responsive Design

Skills

- I can use responsive prefixes (`sm:` , `md:` , `lg:`).
- I can hide/show elements based on screen size (`hidden` , `md:block`).
- I can adjust spacing and typography responsively.
- I can test responsiveness with DevTools.

Resources

- [Responsive Design](#)

Definition of Done (Exercise)

Create a navigation bar that shows links horizontally on desktop (`md:flex`) and collapses into a vertical stack on mobile.

Block 5 – State & Interaction

Skills

- I can style hover states (`hover:bg-blue-500`).
- I can style focus states (`focus:outline-none` , `focus:ring`).
- I can use active and disabled states.
- I can apply transition utilities (`transition` , `duration-300`).

Resources

- [Hover, Focus, & Other States](#)
- [Transitions](#)

Definition of Done (Exercise)

Build a button with hover, focus, and disabled states, including a smooth color transition.

Block 6 – Advanced Customization

Skills

- I can extend the theme (custom colors, spacing, fonts).
- I can use plugins like `@tailwindcss/forms` or `@tailwindcss/typography` .
- I can use dark mode (`dark:`).
- I can compose utilities with `@apply` .

Resources

- [Customization](#)
- [Dark Mode](#)
- [Plugins](#)

Definition of Done (Exercise)

Extend the Tailwind config with a custom color and font, enable dark mode, and build a simple blog post page using the typography plugin.

Block 7 – Project Integration

Skills

- I can integrate Tailwind with frameworks (Vue, React, Next.js).
- I can combine Tailwind with component libraries (DaisyUI, Flowbite).
- I can structure a real-world layout with multiple sections.
- I can prepare Tailwind for production build (purging unused styles).

Resources

- [Tailwind with Vue](#)
- [Tailwind with React](#)
- [DaisyUI Components](#)

Definition of Done (Exercise)

Build a small multi-page site (home + about + contact) styled with Tailwind, responsive and production-ready.

Block 8 – Final Project: Todo App with Tailwind & Vue

Skills

- I can take an existing Vue mini-app (Todo list) and progressively style it with Tailwind.
- I can apply spacing, typography, and color utilities to structure the UI.
- I can make the layout responsive with `sm:` and `md:` breakpoints.
- I can enhance interactivity with hover/focus states and transitions.
- I can apply custom themes or plugins for a polished UI.

Resources

- [Vue + Tailwind Integration](#)
- [TodoMVC Example with Tailwind](#)

Definition of Done (Exercise)

Take the Todo mini-app built in the Vue training and restyle it fully with Tailwind CSS, ensuring it is responsive, clean, and production-ready.
